

BT03 – Self-evaluation

4/22/2020

1. Completion:

- Map view component displays markers about patient locations: 2 pts - **done**
- Patient info component show patient details information: 2 pts - **done**
- List view component shows a list of infected patients in descending infected time: 2 pts - **done**
- When clicking a marker in map component: show patient information in Patient info component and scroll to patient list view item of List view component: 2pts
- When clicking a list view item in list view component: show patient information in Patient info component and move Map to the location of that patient: 2pts - **done**

2. Evaluate:

I can't seem to get task #4 done because of these 2 reasons:

1. I don't know how to handle onClick() event with Marker component provided by react-leaflet libraries.
2. I tried to scroll through my list using "ScrollIntoView()" provided by react-scroll-into-view libraries. Somehow, this doesn't work. (It could be because of the way I handled the first problem that lead to this)

Everything else seems to work just fine, the page is not that eye-catching because I spent so much time try to solve task #4.

3. Conclusion:

8 points
